DIAGNOSTICS

GENERIC

LEGISLATION BASED DIAGNOSTICS

GENERIC is a standard onboard diagnostic tool designed and developed for legislation based diagnostics on modern vehicles.

GENERIC is a product developed for legislated diagnostics such as emission related inspections. It can be used on all modern cars, commercial vehicles and buses.

GENERIC is a universal software based on the standardised and legislated on board diagnostic information that is available in the vehicle. With the vehicle communication interface CDP+ and GENERIC you get access to this information.

GENERIC is used by many satisfied customers like vehicle inspection companies, roadside inspection organizations, police forces and insurance companies.

USER FRIENDLY

GENERIC: so easy, you don't even need a manual.

FAST AND RELIABLE

With GENERIC you perform a high quality service for more vehicles in less time.

UP TO DATE

With GENERIC you will always be up to date with the latest legislation for vehicle inspection.

AUTOCOM GENERIC & CDP+

In order to use GENERIC you need a vehicle communication interface (VCI). Our latest VCI is called CDP+. You buy GENERIC and CDP+ in a product kit which includes user license (1 year) and a case.

GENERIC

GENERIC software allows you to perform legislated diagnostics during periodical vehicle inspection. You can use it on all modern cars, trucks and buses. Generic gives you the ability to read and erase fault codes, read freeze frame data and view vehicle information. GENERIC comes with a 1 year user license with regular updates.

AUTOCOM GENERIC software

CDP+

The GENERIC software works together with the vehicle communications interface CDP+. This is a truly universal tool which covers all communication standards and protocols necessary to communicate with all types of vehicles. Together with our selection of adapter cables diagnostics on older vehicles and vehicles using proprietary connectors is as easy as it should be. CDP+ is your key to vehicle intelligence.
